                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide comprises one of the 5602
complementary strand of a polynucleotide which comprises one of the 5602
nucleotide sequences defined in the specification, where the
complementary strand of a polynucleotides, or (b) a combination
of an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide comprises a 5'-end
complementary strand of a polynucleotide comprises a federace complementary to a
complementary strand of a polynucleotide comprises a 5'-end
complementary strand of a polynucleotide on the complementary to a
complementary strand of a polynucleotide on the complementary to a
complementary strand of a polynucleotide on the complementary to a
complementary strand of a polynucleotide on the complementary to a
complementary strand of a polynucleotide on the complementary to a
complementary strand of a polynucleotide on the complementary to a
complementary strand of the primers are also useful for the complementary complementary strands and complementary strands and complementary compleme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                151 CCGTCGCCGCGCGCGAGGGAGGGTCTTCTCTATGGTGGAGCGATCTCACACGGCCTAGG 210
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ccarceccandeceredededenticaricaridandandedecercentededecentrade 155

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   à
                                   The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the global changes in gene expression in unexposed to the capbounds or progression of these toxic effect, preferably the compound or progression of a toxic effect, preferably the cap cells. Also included are methods of predicting at least one toxic effect of a compound or progression of a toxic effect, preferably the expression in a tissue or cell sample exposed to the compound of two or cap genes listed in the specification, where differential expression of the genes is indicative of at least one toxic effect or progression of the genes is indicative of at least one toxic effect or progression of the genes is indicative of at least one toxic effect or progression. The methods utilise a set of at least two probes (on a solid to support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer system comprising a database containing information identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a set of genes comprising at least two genes listed in the specification, and a user interface to view the information used to present information identifying the expression level in a tissue or cell sample to present information confidentially markers in drug screening and toxicity markers in drug screening and toxicity markers in drug screening and toxicity sasays. The genes and the prediction or identification of identifying toxicity markers in drug screening and toxicity sasays. The present compound or agent the present compound or agent the present compound or agent the sample that has been expressed to a compound or agent. Hepatotoxicity is characterised by centrilobular necrosis and steatosis. The present compound or agent to a hepatotoxic agent and a differentially expressed in response to a hepatotoxic agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5179
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           5296

The present invention relates to a method for predicting a toxic effect of a compound. The method comprises preparing a gene expression profile cof a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising SEQ ID 1-4925, where differential expression of the gene indicates at least one toxic effect. The method is useful for predicting at least one toxic effect. The method is useful for predicting at least one toxic effect of a compound, identifying an agent that modulates the onset or progression of a toxic response, predicting the cellular pathways that a compound modulates in a cell, and identifying an agent that modulates at least one activity of a protein. The method and compositions of the present invention using a database of genes having liver toxin-induced differential expression, are useful in identifying toxicity markers in liver tissues or cells for drug screening and toxicity markers in sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ----TCATGCCTGCAGACATGTCCTGATGGTGGCAAGAACAGAAGGATCT----TTG 5060

cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 5912 muclecide sequences, appearing as ABX50072-ABX55933, or complements of them. Also included are popearing as ABX50072-ABX55933, or complements of them. Also included are if it a transformed cell having a nucleic acid comprising an LMFD nucleic acid dinked to a promoter and a 3, non- translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and comprising a level or pattern of a molecule in a bovine cell or tissue comprising a level or pattern of a molecule acid (comprising any of the 5912 nucleic acid sequences or its complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule; and detecting the level or pattern of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the detecting a level or pattern of the molecule; The LMFD nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. It is useful for geneme mapping, gene identification and analysis, cattle for genetically improving cattle. The present sequence is one of the 5912 to prededing, preparation of constructs for use in cattle gene expression, or the molecule. The present sequence is one of the 5912 complementer forms the specification but was obtained in sequence. Sequence was not shown in the specification but was obtained in sequence according the level or better forms the usproved of the present sequence. The present sequence was not shown in the specification but was obtained in sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2560

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5444
                                                                                                                                                                                                                                                                                                                                                                                                   ë
                                                                                                                                                                                                                                 The invention relates to novel genes (AAI99926-AAI97963) expressed in human neuroblastoma. The nucleic acids are applicable as a probe or primer in disgnosing the prognosis of human neuroblastoma, malignancy and susceptibility indicators or tumour markers for anti-cancer agents. The gene information for diagnosing prognosis is related to factors similar to that for N-myc and TrkA genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AGACTCTAAATTGGCTTCTACAGATCAATAATTTAAATGTAACTAGTTGGGATTTTATAG 114

The invention relates to an isolated polymucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polymucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, or chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antisenses DNA or RNA. The purified polypeptide is useful for generating antisense specific for it. The present sequence is useful as a double form part of the printed specification, but was for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ATCAAAACCGTCAAATTTTTTTTTTT----TATAATTTAAGAAAGAGTTGGGGAATGAC 5325

The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide complises one of the 5602 complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a sequence complementary to a polynucleotide which comprises a 3'-end sequence. Or an oligonucleotide comprises a 1'-end sequence, where the oligonucleotide which comprises a 1'-end sequence, 1'-end sequence,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAH13633 to AAH18742 represent human cDNA sequences, AAB92446 to AAB95893 represent human amino acid sequences, and AAH13629 to AAH13632 represent oligonuclectides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Primer sets for synthesizing polynucleotides, particularly the 5602 full length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Yamamoto J;

Rosen CA, Ruben SM;

New human breast and ovarian cancer associated gene sequences and the polypeptides encoded by these genes, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases.

Claim 1; Page 592; 1299pp; English.

proteins AAP21614 - AAP22031 represent DNA sequences encoding human proteins AAB58711 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are equences AAF22032 - AAF22040 and AAB59129 which are used in the isolation and characterisation of the DNA and protein sequences of the isolation and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; noctropic; or antagonist santiulcer; vulnerary; anticonvulsant; antibacterial; antifilammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antifilamsitic and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists of immune disorders e.g. Addison's disease, allergies, autoimmune of immune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis;

complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the comprisers at strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the sequence and an oligonucleotide comprising a sequence complementary to a copynucleotide which comprises a 3'-end sequence. Where the oligonucleotide which comprises a 1'-end sequence, where the clipsonucleotide which comprises a 1'-end sequence complementary to a copynucleotide which comprises a 1'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in copinate in the primers are useful for synthesising polynucleotides, particularly full-length combas. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length combas. The primers allow obtaining of the full-length combas. The primers allow obtaining of the full-length combas. The primers allow obtaining of the full-length combas cashing and and and additional additional additional and additional additional and additional additional and additional additional and additional and additional and and and a sequences; and additional of the compassent collgonucleotides. Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length

Claim 8; SEQ ID NO 15655; 2537pp + Sequence Listing; English

The present invention describes primer sets for synthesising 5602 fulllength cDNAs defined in the specification, Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide comprisents to the complementary strand of a polynucleotide comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 1'-end sequence, where the comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, betterticularly full-length cDNAs. The primers are also useful for the detection and/or disgnassis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03165 to AAH13622 represent consent human amino acid sequences; and AAH13622 to AAH13622 represent coligonucleotides, all of which are used in the exemplification of the present invention

Sequence 1, Application US/08726725
; Patent No. 5773290
; GENERAL INFORMATION:
APPLICANT: Gould, Michael N.
APPLICANT: Chen, Kai-Shun
ITILE OF INVENTION: MAMMARY GLAND-SPECIFIC PROMOTERS
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Quarles & Brady
STREET: 411 East Wisconsin Avenue
CITY: Milwaukee
STATE: Wisconsin
COUNTRY: U.S.A.
IP: 53202-449
COMPUTER READALE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patent In Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
CLASSIFICATION: 435
ATTONNEY/AGENT INPORMATION:
NAME: Baker, Jean C.
REGISTRATION NUMBER: 35,433

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 3, Application US/09600319

Patent No. 6780510

GENERAL INFORMATION

GENERAL INFORMATION

APPLICANT: Owens, Gary

APPLICANT: Owens, Gary

APPLICANT: Owens, Gary

TITLE OF INVENTION: Identification of a Smooth Muscle Cell (SMC) Specific Smooth Musc

TITLE OF INVENTION: Identification of a Smooth Muscle Cell (SMC) Specific Smooth Musc

TITLE OF INVENTION: Models 1.03

CURRENT PELICATION NUMBER: US/09/600,319

FRIOR PELICATION NUMBER: PCT/US99/01038

PRIOR PILING DATE: 1999-01-15

PRIOR PILING DATE: 1999-01-15

PRIOR PILING DATE: 1999-01-16

NUMBER OF SEQ ID NOS: 3

SOUTHARE: PatentIn version 3.0

SEQ ID NO 3

LEASTH: 16011

MANDER OF SEQ ID NOS: 3

MANDER OF SEQ ID NOS: 3

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                           Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AK082957 AK082957 AK082660 BAK08660 BQ26670 BQ26670 BC583620 CC583620 CC583620 CC583620 BE65191 GC746885 BE513014 BI654191 BI65419 BI6541
